

Gender and Technology: State of the Field

Roundtable

It has been nearly twenty years since the publication of *Gender & Technology: A Reader* (Baltimore, 2003), and the field has grown exponentially since to include transgender studies of technology, feminist science and technology studies, gender and sexuality studies, gender and disability studies, and the incorporation of intersectional antiracist and critical race theory with gendered analysis.

The organizer seeks three to four panelists across career levels who would like to give a ten-minute assessment of the state of the field of gender and technology broadly since the publication of *Gender & Technology* and to point toward directions for the field in the future. Panelists' expertise can center in any geography or time period, but the abstract must address the questions: what is the state of gender and technology as an academic field from your perspective? What are the most promising directions of the field in the future?

If interested in serving as a panelist, chair, or commentator, please send a Word document with name, contact information, and a 150- to 250-word abstract of your proposed answer to the e-mail address below by midnight GMT on Tuesday, April 5. Please also indicate if you aim to attend in person or online—this plays no role in decision-making, but it is necessary to include this information in the submission form. The organizer will contact you shortly if your abstract is accepted.

Organizer: Donna J. Drucker, MLS, PhD

Independent Scholar
