

SHOT 2023 Call for Open Session:  
**Engineering Environment, Resilience and Longevity**

Engineers, and the practices of engineering have complex roles with respect to environment and un/intended consequences in the history of technology. This panel is open to (but not limited to) presentations that address the following themes:

- The historical significance of engineering in shaping and adapting to environmental challenges
- The historical significance of the role of engineers and engineering practices on the conceptualization and characterization of resilience, risk and disaster
- The relationship between environment, resilience and risk, and engineering education in historical perspective and contemporary teaching practices

**Organizers:**

This call is organized by the **Prometheans** Special Interest Group (SIG), which supports scholarly community in the history of engineering. We are also open to considering other proposed topics that relate to the history of engineers and engineering.

Learn more about SHOT SIGs: <https://www.historyoftechnology.org/about-us/officers-and-committees/special-interest-groups/>

Join the Prometheans email list: <https://lists.virginia.edu/sympa/info/prometheans>

**To Apply:**

By **March 26<sup>th</sup>** Email Prometheans Chair, Ellan Spero (efs8 (at) mit.edu) with the following:

- Proposed presentation title
- Brief abstract (300 words max)
- Short CV
