

History of Spaceflight

I am interested in a session exploring spaceflight technology and its consequences. My particular specialty is the history of the American astronaut corps and I am interested in presenting the archival research I have done on the lost crew of the Space Shuttle *Columbia*, during mission *STS-107*. But the session does not need to only focus on astronauts. I am interested in papers that explore any aspect of spaceflight technology, whether that concerns human spaceflight, satellites, robotic missions beyond low Earth orbit, or the efforts of nations besides the United States in pursuing these feats.
